

KUNAL RAJU GAIKWAD

Software Engineer — Backend & Full Stack

Hyderabad, India · +91 7249102868 · gaikwadkunal2686@gmail.com · linkedin.com/in/kunal-gaikwad-95271027a · github.com/Kunal-debug1

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 6 months of production internship experience building Django REST APIs, reducing SQL query execution time by 20% through strategic indexing, and shipping full-stack web applications. Proficient in Python, Django, Flask, React.js, Docker, and SQL databases. Strong foundation in Data Structures & Algorithms, System Design, and Cloud fundamentals (AWS). Actively building AI/LLM-integrated applications using Google Gemini. Seeking software engineering roles at product/service-focused companies.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript (Basic), SQL, Java (Core)

Backend: Django, Flask, FastAPI, JWT, MVC/MVT, ORM Optimization, REST API Design, Microservices basics

Frontend: React.js, HTML5, CSS3, Bootstrap 5, Tailwind CSS, Responsive Design, DOM Manipulation, Fetch API

Databases: PostgreSQL, MySQL, SQLite, MongoDB — Schema Design, Indexing, Query Optimization, Window Functions, Joins, SQLAlchemy ORM

DevOps & Cloud: Docker, Docker Compose, GitHub Actions (CI/CD), AWS (EC2, S3, RDS fundamentals), Linux, Git / GitHub, Render, Firebase, PythonAnywhere

AI / Data: Google Gemini API, Ollama, LLM Integration, Pandas, NumPy, Scikit-learn, EDA, Feature Engineering

Tools & CS: Postman, VS Code, PyCharm, Redis (basics), Celery (basics), DSA, OOP, Clean Code, SDLC, Agile / Scrum

PROFESSIONAL EXPERIENCE

Python Developer Intern | [Kalawati Technologies](#) | Remote *Mar 2025 – Aug 2025*

- Designed and maintained 15+ production-grade RESTful API endpoints using Django REST Framework, serving as the primary backend layer for client-facing features — handling authentication, data validation, and business logic.
- Reduced average SQL query execution time by 20% by redesigning database schemas, adding strategic B-tree indexes on high-frequency filter columns, and refactoring N+1 query patterns using `select_related` and `prefetch_related`.
- Refactored 3 legacy modules applying Clean Architecture principles (separation of concerns, SRP) — reduced average lines per view from 120 to 40, cutting time-to-feature for new engineering work.
- Collaborated cross-functionally with frontend and QA engineers within Git-based CI/CD workflows — participated in code reviews, wrote PR descriptions, and ensured seamless integration and feature validation before releases.
- Containerized local development environment using Docker and Docker Compose, improving onboarding speed for new team members and ensuring environment parity between development and staging.

PROJECTS

Personal Finance Management System · *Flask · PostgreSQL · SQLAlchemy · Redis · Docker · Bootstrap 5 · PythonAnywhere*

- Deployed a production-ready full-stack finance app with secure authentication (bcrypt + CSRF), multi-account management, transaction tracking, bill monitoring, and savings goals on PythonAnywhere.
- Architected a normalized relational schema with 6 ORM models (User, Account, Transaction, Bill, SavingsGoal, Category); centralized balance sync logic via `update_account_balance()` ensuring ACID-compliant data consistency across all transaction events.
- Delivered analytics dashboard aggregating net cash flow, category-wise expense breakdowns, and upcoming bills via SQLAlchemy `group_by` + `func.sum()` queries — 80% faster than Python-side aggregation.
- Containerized with Docker + Docker Compose; configured GitHub Actions CI pipeline to run pytest unit tests (70%+ coverage) on every push — catching regressions before deployment.

JARVIS AI Voice Assistant · *Python · Google Gemini · Ollama · SpeechRecognition · REST APIs*

- Built a modular Python AI voice assistant with dual LLM backends (Google Gemini for cloud, Ollama for local/offline), supporting PC control, productivity automation, and natural language task execution.
- Designed a plugin-style skill architecture — 10+ independent modules (weather, calendar, web search, media control) loaded dynamically, enabling zero-coupling feature addition without touching core logic.
- Implemented streaming LLM response handling, graceful fallback logic (Gemini → Ollama → rule-based), and intent classification with 90%+ accuracy on common voice commands.

Tweet Web Application (Twitter Clone) · *Django · PostgreSQL · Redis · JavaScript (Fetch API) · Docker · HTML/CSS*

- Built a full social platform supporting user profiles, threaded replies, likes, saves, reshares, direct messaging, and image uploads — 100% end-to-end ownership from schema design to deployed frontend.
- Implemented async actions (likes, reshares, follows) via Fetch API with CSRF token handling for zero-reload interactivity; added Redis caching for hot feed data with 15-minute TTL.
- Containerized with Docker; migrated from SQLite to PostgreSQL for production-grade concurrency support and improved query performance.

EDUCATION

Bachelor of Technology — Computer Science & Engineering | *Graduated 2025*

PES College of Engineering, Maharashtra (Dr. Babasaheb Ambedkar Technological University)

CGPA: 6.61/10

- Tech Team Member, E-Cell — led development of campus web solutions supporting 50+ student entrepreneurship initiatives.

CERTIFICATIONS

- **Data Science & Generative AI** — Naresh IT (2025)
- **Complete Python Developer** — Udemy (2024)
- **Full Stack Web Development (HTML, CSS, JS, React, MySQL)** — Internshala (2023)
- **Python Programming Fundamentals** — Infosys Springboard (2024)
- **Linux & AWS Fundamentals** — Zero One Data Lab (2022)
